

Global Safe New Zealand is proud to announce its industry unique Floor Safety Programme[®] (FSP[®]) for commercial clients.

Why the FSP[®] is unique and so important for our clients.

When a slip/fall risk is identified, the customer's relevant department will contact a floor safety specialist company to rectify the problem. This company will treat a sample area of flooring. If the sample is satisfactory and the quote is accepted, the floor safety specialist company will complete the job and the floor will be slip resistant, in line with the relevant Australian/New Zealand Standards.

Global Safe New Zealand, even at this stage, is different from any other anti-slip company. We will provide the client with an initial Floor Safety Inspection report, where we show the floor's condition, the condition of the customer's cleaning equipment and the relevant Australian/New Zealand Standard requirements. Once the customer agrees to our services, we then provide inspections on an ongoing basis. We train staff in proper floor cleaning procedures, identifying the correct cleaner to be used, and introduce to the customer our own superior cleaning formula, specifically designed for Safe Solution[®] treated surfaces.

At this stage Global Safe New Zealand will then provide our FSP[®] warranty to the customer. This warranty will stay in effect while the customer remains on our FSP[®], which can be for the lifetime of the floor surface, and is based on the customer following our recommendations. These relate to the customer maintaining due diligence, and to maintaining the safety conditions of the treated floor surface. In doing so if an unfortunate slip/fall accident should occur, the FSP[®] warranty will provide the customer with all relevant documentation showing that they have indeed taken all necessary practical steps, and their due diligence, to provide and maintain a safer working environment.

Other companies may provide a warranty; however, this warranty is usually only based on the slip resistive qualities of the floor surface, and a time period during which those slip resistant qualities will not be reduced. After this time it is usually up to the client to maintain the floor on their own; however we would normally provide on-going maintenance in our FSP[®].

Global Safe New Zealand, after talking to its very large international client base, has identified the need to provide this complete floor care solution – **at no additional cost to the client** – the Floor Safety Programme[®].

We provide staff training, ongoing written monitoring, ongoing advice, and most importantly, the necessary documentation showing customer due diligence.

If other anti-slip providers offer any of these above services at all, they are likely to come with additional costs to the client.

We also have representatives in USA, Canada, Australia, the Pacific Islands and the Philippines

Is there a cost for the Floor Safety Programme®?

Commercial clients are automatically included in this programme at the time of the initial anti-slip application. The client effectively receives \$1500 worth of services (as detailed below) at no additional cost. The FSP® is valid for a period of two years from the initial floor treatment.

The Floor Safety Programme® includes:

- Staff Training in proper floor care and cleaning procedures, and assisting the client to compile specific in-house safety policies, i.e. wet floor policy.
- Assistance with identifying the correct cleaning chemical to be used, or introduction of Clean Step™, our Superior Multipurpose Cleaner, Degreaser, & Sanitizer, formerly known as the Maintenance Solution™.
- Ongoing and regular written Floor Safety Inspection reports and recommendations, which will also include our own in-house Coefficient of Friction (COF) test measurements using the Slip Alert™ device. For those clients that require certified COF testing, Global Safe New Zealand will assist them by providing reputable and certified engineers to perform such as tests as the Wet Pendulum test.
- Global Safe will provide valuable documentation such as Warranty Certificates, Floor Safety Inspection reports, and on request, an Affidavit to verify that the client has followed the FSP® to monitor the slip/fall risk on an ongoing basis.

The FSP® offers an all inclusive ongoing risk management Programme to the client, providing complete peace of mind slip/fall prevention.

For further information regarding to the FSP® contact us on +64 (0) 6 377 7555 or click on www.globalsafe.co.nz
