

## **STUCK TRYING TO FIND A SOLUTION TO A TRICKY PROBLEM – LET US HELP**

We at Global Safe New Zealand have a great range of non slip treatments, that will have you and your clients well covered under the building code.

Our fully trained representatives and applicators are able to provide you with information on the various issues relating to the surface to be treated and will go the extra mile to help you find the best solution. As you can see from the following examples, we have been able to offer successful solutions to number of interesting projects all with their own unique requirements. Of which these are just a few:

The Wellington City Council approached us to see if there was a non slip surface treatment that would make man hole covers non slip. Whilst there were a number of non slip treatment options available, it was decided that Floor Tuff Green would be the most appropriate for this particular surface. By using our Floor Tuff Green treatment we were able to provide a non slip surface for the man hole without losing the intricate cultural design. The Wellington City Council is very pleased with the end result which completely satisfied their requirement.

The Palmerston North City Council has a large number of tiled steps and landings leading up to the main entrance of their building. Unfortunately, over time these tiles had begun to lose their slip resistance. The Council took the proactive approach to have the tiles treated to increase the slip resistance before it became a slip hazard. As the tiles are an integral part of the overall architectural design it was important to keep the original look of the steps and landing, while still having a cost effective solution.

The council decided on the Safe Solution option, which etches the tiles making them non slip. The work was completed on time and to budget with treatment being undertaken outside of normal hours to minimize disruption to visitors. The Council

is extremely pleased with the outcome.

Tuturumuri School, like many other schools, was looking for a solution to make their wooden deck, steps and ramp non slip. As the school is small it was important to get the most cost effective solution that would last longer than just one winter. After visiting the site and discussing possible options, the school decided to go with our water based polyurethane product Floor Tuff Green. The work was undertaken during the summer holidays whilst the school was closed and is now ready for the new 2010 School Term.

As outlined our company is able to offer a variety of solutions, using a range of different non slip treatments that can treat almost any surface in any situation. Our products also come with commercial warranties that not only cover the product but also the application.

If you have an internal/external surface that you would like to have made non slip, or would like more information on our range of products, please feel free to contact us.
