

QUICK AND EASY SOLUTIONS TO YOUR HEALTH AND SAFETY PROBLEMS

We all know that wet weather increases the chance of slips and falls due to surfaces become slippery when wet, but did you also know that this hazard can easily be remedied, without resorting to mats which have to be continually moved and cleaned, or getting the area repainted every year.

Well you can, by using our popular non slip surface treatment Floor Tuff Green.

This versatile treatment has already been successfully used by many schools both here and in Australia, on their steps, walkways, decks, ramps and paths, providing a long lasting, cost effective, non slip safety surface.

For those schools who have not yet had their surfaces treated, or who have tried other non slip products that haven't lasted, there is still time to get the work done before the inclement weather sets in. Now is the perfect time to start looking at arranging to have the treatment undertaken before winter, whilst the timber is still dry.

Our company offers a full range of surface internal / external treatments to suit almost any surface.

Particularly ramps, decks, verandahs pathways, steps and even manhole covers

Unlike other non slip solutions our treatments come with a commercial warranty that covers both product and application. We also offer schools written documentation that satisfies their Health and Safety requirements.

We can even offer solutions to schools that are operating on a tight or smaller budget.

If you would like more information on our range of non slip products, or would like to arrange for a quote, just contact us and we will have our representative call.
